

# Industry: improving industrial performance

Optimizing both production processes and energy consumption are two key factors that can give industrial companies a competitive edge. This results in energy efficiency, higher reliability, the modernization of their production facilities, etc. VINCI Energies supports industrial customers around the world with engineering, implementation and maintenance services, but also with fire protection, because in many cases the data and production losses due to a fire appear to be much more serious than the direct damage to property.

Active in all of the leading industrial sectors, VINCI Energies designs and implements customized solutions and services that enable industrial companies to address the actual challenges presented by technological change in our industrial environment. True added value is offered within each area of our expertise: process operation and control, as well as electrical, mechanical and thermal engineering. Our teams are committed over the long term, with the main objective being to improve performance of our customers' production facilities and respond to their growing demand for traceable and secure processes.
